

Scenario 1: -

Test the search feature

Missing Information

What is being searched?

Search input

Where is the search done – feature/application?

ICEPOT Framework: -

Instruction: Test the search feature of the application

Context: The application allows users to search for records using a search box. The search feature should return relevant results based on the user's input.

Examples: Include valid keyword, partial keyword, no-result, blank input, special-character, case-sensitivity, and numeric-search scenarios.

Persona: Act as a Senior QA test engineer specializing in functional and UI testing.

Output: Provide test scenarios with test steps, test data, and expected results. Please give positive test cases.

Tone: Keep the response concise, structured and professional.

ICEPOT Framework prompt result:

ID	Scenario	Test Steps	Test Data	Expected Result
SRCH-01	Search with an exact valid keyword	1. Open the records page. 2. Enter a known record keyword. 3. Submit search.	Johnson	Matching records are displayed and are relevant to "Johnson."
SRCH-02	Search with a partial keyword	1. Enter part of a known keyword. 2. Submit search.	John	Records containing or beginning with the partial keyword are returned.
SRCH-03	Search with mixed-case keyword	1. Enter a known keyword using mixed case. 2. Submit search.	jOhNsOn	Relevant results are returned regardless of input letter case.
SRCH-04	Search using numeric data	1. Enter a valid numeric record value. 2. Submit search.	10245	The record associated with numeric value 10245 is displayed.

ID	Scenario	Test Steps	Test Data	Expected Result
SRCH-05	Search with no matching record	1. Enter a unique non-existent value. 2. Submit search.	NoMatch999	A clear “No results found” message is shown; no unrelated records appear.
SRCH-06	Submit blank search	1. Leave the search box empty. 2. Click Search or press Enter.	Blank	The application handles the input gracefully—either displays all records/default view or prompts the user to enter a search term.
SRCH-07	Search with special characters	1. Enter a supported special-character search value. 2. Submit search.	O'Connor	Matching records containing the special character are returned correctly.
SRCH-08	Search with spaces around a valid keyword	1. Enter a valid keyword with leading/trailing spaces. 2. Submit search.	Johnson	Spaces are trimmed and relevant results for “Johnson” are displayed.
SRCH-09	Search by multiple-word phrase	1. Enter a complete record name or phrase. 2. Submit search.	John Smith	Records matching the full phrase are returned with relevant ordering.
SRCH-10	Search using Enter key	1. Enter a valid keyword. 2. Press Enter.	Johnson	Search executes without needing to click the Search button, and matching results appear.

Scenario 2:

Generate test cases for file upload

Missing Information

No file types, no size limits,
no success/failure criteria.

Week Prompt: -

Its gives multiple numbers of test cases.

ID	Test case	Expected result
FU-01	Upload a valid supported file	Upload succeeds; file name, size, and status display correctly.
FU-02	Upload each supported file type	Each accepted type uploads successfully.
FU-03	Upload an unsupported extension	Upload is rejected with a clear validation message.
FU-04	Upload a file with mismatched content and extension	File is rejected if server-side type validation fails.
FU-05	Upload a file at the maximum allowed size	Upload succeeds.
FU-06	Upload a file larger than the limit	Upload is rejected with the configured size-limit message.
FU-07	Upload an empty (0-byte) file	System follows the specified rule: accepts or rejects with clear feedback.
FU-08	Upload a corrupted file	Upload is rejected or flagged; application remains stable.
FU-09	Upload a file with a very long filename	Filename is handled safely; no UI breakage or crash.
FU-10	Upload a file with special characters in its name	File uploads safely and displays/normalizes correctly.
FU-11	Upload a filename containing path traversal text (../)	Filename is sanitized; no unintended filesystem access occurs.
FU-12	Upload a duplicate filename	System applies the defined behavior: replace, version, rename, or reject.
FU-13	Upload multiple valid files	All files upload correctly when multi-upload is enabled.
FU-14	Upload more files than the allowed count	Excess files are rejected with clear feedback.
FU-15	Mix valid and invalid files in a multi-upload	Valid files proceed; invalid ones show individual errors.
FU-16	Cancel an upload in progress	Upload stops cleanly and no partial file is retained.

ID	Test case	Expected result
FU-17	Retry after a failed upload	Retry works without duplicate or corrupted records.
FU-18	Interrupt network during upload	User sees a recoverable error; no incomplete file is treated as complete.
FU-19	Upload under slow network conditions	Progress/status remains accurate; timeout behavior is clear.
FU-20	Refresh or navigate away during upload	System warns the user or safely handles the incomplete upload.
FU-21	Upload a file containing malware test content (e.g., EICAR)	File is blocked/quarantined per security policy.
FU-22	Upload an executable disguised as an allowed type	Server detects and rejects unsafe content.
FU-23	Verify uploaded-file access permissions	Only authorized users can view, download, or replace the file.
FU-24	Verify download after successful upload	Downloaded file matches original content and metadata.
FU-25	Delete an uploaded file	File is removed from UI and storage according to retention rules.
FU-26	Upload using drag and drop	Drop zone accepts valid files and provides equivalent validation.
FU-27	Upload using keyboard-only navigation	Control is reachable, operable, and announces errors accessibly.
FU-28	Validate upload progress indicator	Progress updates accurately and reaches completion state.
FU-29	Verify audit/log entries	Upload events record the appropriate user, timestamp, and outcome.
FU-30	Upload concurrently from multiple sessions	No corruption, race condition, or incorrect file association occurs.

ICEPOT Framework: -

Instruction: Generate test cases for file upload in a local system.

Context: The results allow users to search for records using a search box. The search feature should return relevant results based on the user's input.

Examples: Include valid browse window, file open button, submit keys.

Persona: Act as a Senior QA test engineer specializing in functional and UI testing.

Output: Provide test scenarios with test steps, test data, and expected results. Please give positive and negative test cases with the limit of 10 test cases.

Tone: Keep the response concise, structured and professional.

ICEPOT framework prompt result:-

ID	Type	Test scenario	Test steps	Test data	Expected result
FU-01	Positive	Upload a valid supported file using Browse	1. Open the local application. 2. Click Browse . 3. Select a valid file. 4. Click Open . 5. Submit upload.	ValidRecord.csv	File is selected and uploaded successfully; confirmation/status is displayed.
FU-02	Positive	Verify Browse window opens correctly	1. Click Browse . 2. Review the file selection dialog.	N/A	File browser opens, displays accessible local folders/files, and provides Open and Cancel buttons.
FU-03	Positive	Select file using keyboard submit key	1. Click Browse . 2. Navigate to a valid file using arrow keys. 3. Press Enter .	ValidRecord.xlsx	Selected file is added to the upload field exactly as when clicking Open .
FU-04	Positive	Search records after successful upload	1. Upload a valid record file. 2. Enter a known record value in the search box. 3. Press Enter .	File: Employees.csv Search: EMP1001	Relevant uploaded record is returned in search results.
FU-05	Positive	Search using partial text	1. Upload valid records. 2. Enter partial record text in the	Search: John	Results containing or matching John are displayed.

ID	Type	Test scenario	Test steps	Test data	Expected result
			search box. 3. Submit using Enter .		
FU-06	Negative	Attempt upload without selecting a file	1. Open upload page. 2. Leave file field empty. 3. Click upload/submit.	No file	Upload is blocked and a clear “Please select a file” validation message is shown.
FU-07	Negative	Upload unsupported file type	1. Click Browse . 2. Select an unsupported file. 3. Click Open and submit.	Script.exe	Upload is rejected with a clear supported-file-type error; no file is stored.
FU-08	Negative	Upload file exceeding permitted size	1. Select a file larger than the configured limit. 2. Submit upload.	LargeRecords.csv (> configured limit)	Upload is rejected with a file-size validation message.
FU-09	Negative	Search with no matching record	1. Upload valid records. 2. Enter a non-existent value. 3. Press Enter .	INVALID999	No records are returned; a clear “No results found” message is displayed.
FU-10	Negative	Search using blank or special-character input	1. Click the search box. 2. Enter blanks or special characters. 3. Press Enter .	Blank, @#\$%^	Application remains stable; input is validated or returns no results without errors.
